

How to charge.

01

Before use

The charging box may only be used for charging or engine heating with an approved adapter.

Check that the charging cable is undamaged and that the outlet light is green. If it is red, do not connect a charging cable – report the fault to the facility owner or the retailer of the charging box.

02

Start charging

Connect the charging cable to the car and the outlet. Start charging the way that applies to your site:

- App (Waybler or third party)
- RFID tag
- QR code

If autostart is enabled, charging starts automatically.

03

Stop charging

Stop charging in the app or web browser, or tap your RFID tag.

Charging also stops when the charging cable is removed.

What does the light mean?

Solid green

The box is powered and ready to use.

Flashing green

The car is correctly connected and charging can be activated.

Solid blue

Charging in progress.

Flashing blue

Charging on standby. The car is fully charged or waiting for available power.

Solid red – no cable connected

The box has detected a fault. Do not use the box – contact the facility owner or the retailer of the box.

Solid red – cable connected

Remove the charging cable. Then:

Green light – fault in external equipment.

Red light – contact the facility owner or the retailer of the box.
